e-Connect

Web platform for
security systems

EL.MO. IN ITALIA

international@elmospa.com | www.elmospa.com

A competitive advantage for our partners

EL.MO. took advantage of its **40 years experience** in security solutions and created **e-Connect**, the innovative web platform for the **management, centralization and supervision** of EL.MO. intrusion detection systems for **end-users, installers, distributors** and service companies.

With its multilevel structure, e-Connect meets the growing needs of **autonomy by end-users and remote management by installers.**

USERS can communicate with their intrusion detection system by smart-phone, tablet and PC, always and everywhere, monitoring system status, receiving notifications and enabling or disabling alarm devices, thanks to the user-friendly interface and intuitive icons.

INSTALLERS can manage all the systems of their customers in a single platform, with the possibility to supervise and remotely assist all the systems, everywhere, offering them customized solutions.

Users

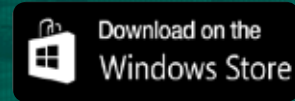

Installers

Distributors

Download the app for your device

Available languages:

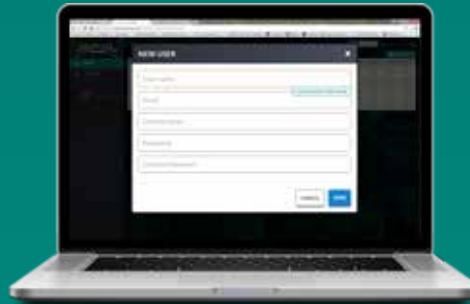

What can

Systems list

Complete list of all the installed systems in a single platform

Accounts management

Create end-users accounts, enabling or disabling them to specific services

Systems supervision

Possibility to supervise customers systems

installers do?

Remote assistance

Configure and remotely assist systems through BrowserOne Enterprise software

e-mails and alerts

Send e-mails to end-users for maintenance or definable events

Theme customization

Customize customers page with graphic themes, logo and advertising banners

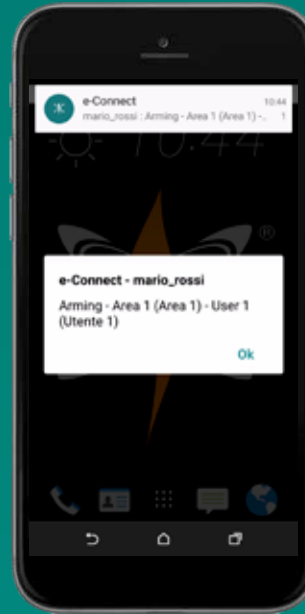

What can

Online preview

Control the status of your system: power supply, battery, alarms

Push notifications

Receive real time notifications for each event

Graphic Maps

Enable or disable devices directly touching icons on the map

end-users do?

Intuitive icons

Enable and disable different areas of your home

Home Automation

Control lighting, heating, irrigation

Videosurveillance

With e-Connect app, you can view your video surveillance system cameras directly from your smartphone or tablet

Maps configurations

Creating new maps for your customers has never been so easy.

Simply upload a map image on the maps configurator and place the detectors, outputs and areas icons with drag-and-drop.

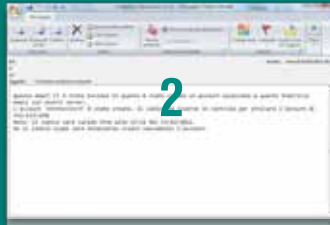

Immediate registration

No settings or configurations: just 3 steps and the panel is online.

Creating account on the server
username, e-mail, password

Receiving registration code
Receive an e-mail with
the registration code

Insert registration code
Enter the registration code on the
menu of the control unit

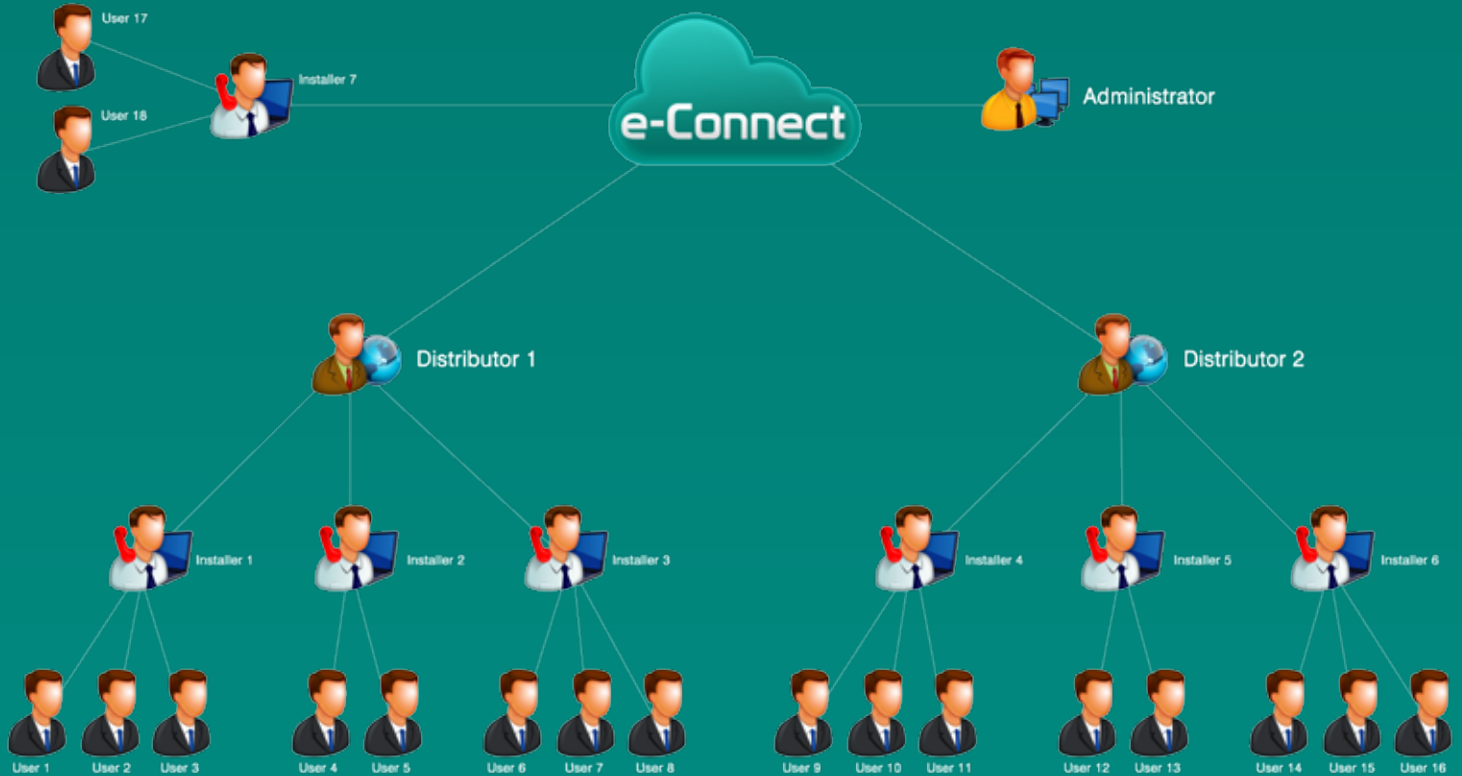

Security of the System

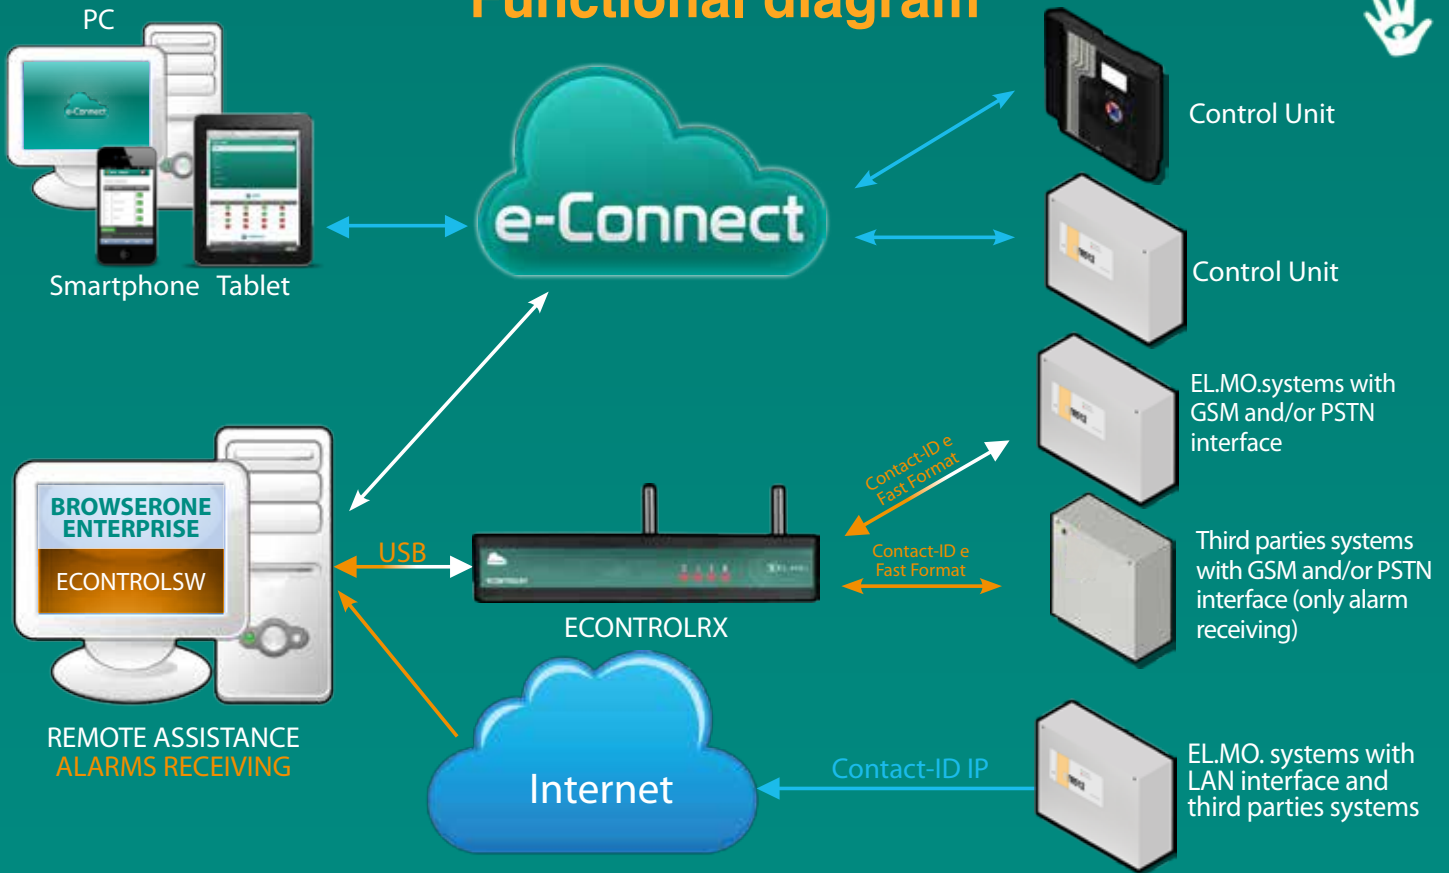

The use of **SSL communication protocols**, combined with certificates issued by a world-famous **certification authority**, provides a safety profile at the same level of the solutions adopted by the activities of **remote banking**.

Multi-level structure

Remote assistance with BrowserOne Enterprise

Through e-Connect authentication, installers can use **BrowserOne Enterprise** software for the remote assistance of all their managed systems, always and everywhere.

BrowserOne Enterprise allows you to share in the same server each configuration of all the installers team.

In this way installers will always be updated and interchangeable in their team, and you will not lose important data in case of substitution or loss of the pc.

With **BrowserOne Enterprise** you can backup all the past control units configurations, so that, in case of need, you will be able to restore a past configuration.

- Remote assistance **via IP, through Wi-Fi or LAN or GSM-GPRS** connection
- Possibility to connect **also via GSM or PSTN**, thanks to the ECONTROLRX hardware interface, with USB connection to the PC
- **Save and share systems configurations** with your installers team
- Save and share **in one single database**: customers data, devices configurations, log events, connection settings.
- **Back-up** and possibility to **restore** past configurations
- **Automatic download** of updated control unit firmware, to ensure always the **maximum performance of your systems**

e-Control alarms receiving system

e-Control is the **alarms receiving system** that can manage **both EL.MO. and third parties devices**, according to the **Contact-ID and Fast Format** standard.

e-Control system is composed by **ECONTROLRX** hardware interface and **ECONTROLSW** software, that allows you to

manage intuitively customers database and to save useful customized information such as recurring warnings or rules. The installer can easily organize and customize with signals, rules and hourly, daily and monthly cadences, one or more management profiles and then apply them in a flexible way to any new system.

- Contact-ID protocol via IP
- **Maps** configuration
- Immediate cancellation of events in the database
- Automatic SMS and e-mail notifications for specific events
- Simultaneous management of more customers and more installers
- Importing of the control unit configuration directly from the database
- Automatic start of remote assistance session through BROWSERONE ENTERPRISE, because of alarm event
